

SignCore

SignCore is a secure and scalable digital signature infrastructure and digital sign service. It combines all types of corporate signing scenarios into a single platform and fully complies with legal regulations (Electronic Signature Law No. 5070).

Core Signature Scenarios

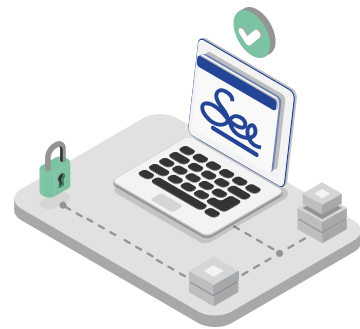

SignCore offers three main signing methods based on different technical and operational needs:

- **Centralized Signature:** Certificates are stored securely on a central server or an HSM (Hardware Security Module). It is ideal for high-volume, bulk signing operations.
- **Mobile Signature:** It integrates directly with GSM operators (Turkcell, Turk Telekom, Vodafone). Users can sign legally binding documents via their mobile phones without needing extra hardware like card readers.
- **Distributed Signature:** The signing process happens directly through a smart card or USB token plugged into the user's own computer. The DSS Client application ensures secure access to these local certificates.

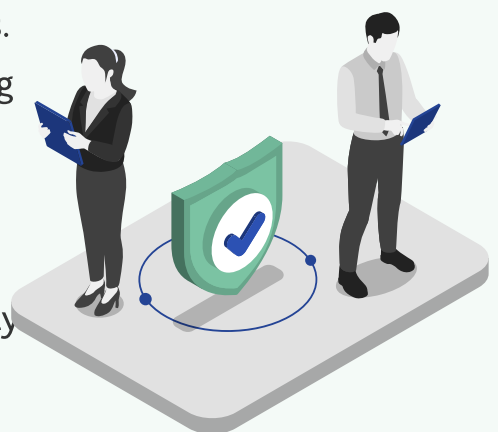

Technical Features

- **Wide Format Support:** Supports signing in PAdES (PDF), CAdES (Generic) and XAdES (XML) standards.
- **Timestamping:** Integrates with public and authorized root authorities to legally prove that a document existed at a specific time and has not been changed since.
- **Validation:** Checks the validity of signatures and certificates in real-time using OCSP and CRL support.
- **Visible Signature & Brand Identity:** Supports adding company logos or visual signatures directly onto PDF documents.
- **Flexible Workflow Management:** Manages complex signing processes, including serial (step-by-step approval) or parallel (multiple signatures at once) workflows.

Business Benefits

- **Speed and Efficiency:** Speeds up workflows by cutting down physical signing and shipping processes from days to seconds.
- **Cost Savings:** Completely eliminates paper, printing, shipping and physical archiving costs.
- **Legal Assurances:** Provides an infrastructure that fully complies with Law No. 5070 and stands up in court.
- **High Security:** Prevents document forgery and loss while fully guaranteeing document integrity.
- **Easy Integration:** Integrates quickly into your existing ERP, CRM or Document Management Systems (DMS) thanks to its API-based structure.

Application Areas

Banking and Finance

Instructions, loan contracts and foreign exchange transactions

Human Resources

Employment contracts, payroll signing and leave forms

Procurement and Logistics

Supplier contracts, proposal approvals, and order forms

Law and Management

Board resolution books, powers of attorney, and official correspondence

In summary; SignCore frees your organization from paper dependency and transforms all your signing processes into a digital, secure, and fast ecosystem.
