

EasySign

EasySign is a digital platform that allows documents to be shared, signed or approved legally and stored with the parties whose signature (e-signature, mobile signature) or approval is requested via a single platform.

WHAT IS EasySign?

With this digital platform, it is ensured that all documents that are needed in both internal and external processes of companies or that need to be regulated and approved / signed in accordance with legislation are carried out completely in digital and legally valid environment. This solution allows to create, send, approve, sign and archive the necessary documents in digital platform. Users get rid of the paper environment completely and can perform approval/signature/delivery/archive transactions of all kinds of documents legally in digital platform.

GOALS

- Preventing the blockage of processes by gaining the ability to process documents on a single platform independent of the location,
- Carrying out the transactions that are in paper to end-to-end in digital environment and legally valid,
- Increasing operational efficiency by reducing operation duration and costs,
- Removing the obligation of physical storage of paper documents and reducing high storage costs,
- Being able to manage the documents that need to be signed from end to end and to have bidirectional interaction.

COMPONENTS

Process Management

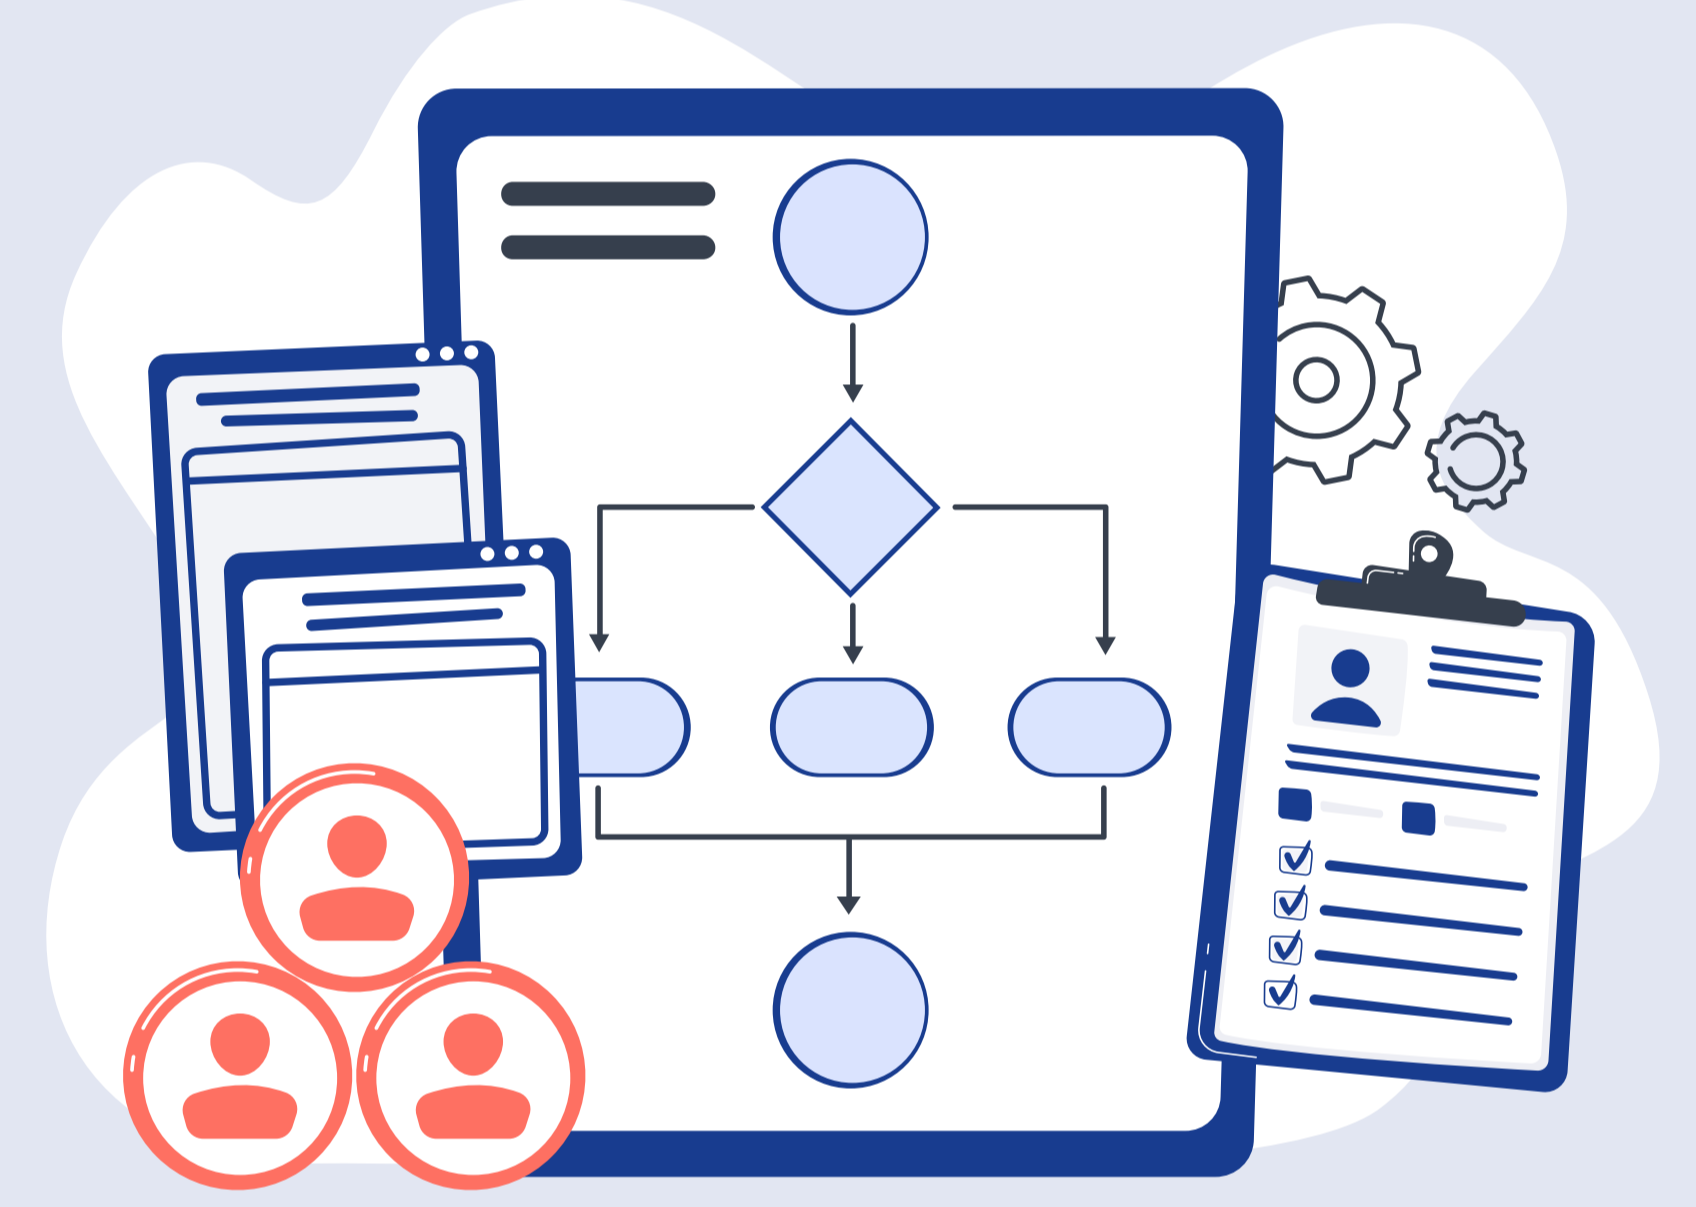

- Designing process templates, starting a new process, pending processes, sent processes, completed processes and canceled processes modules can be easily managed.

User Management

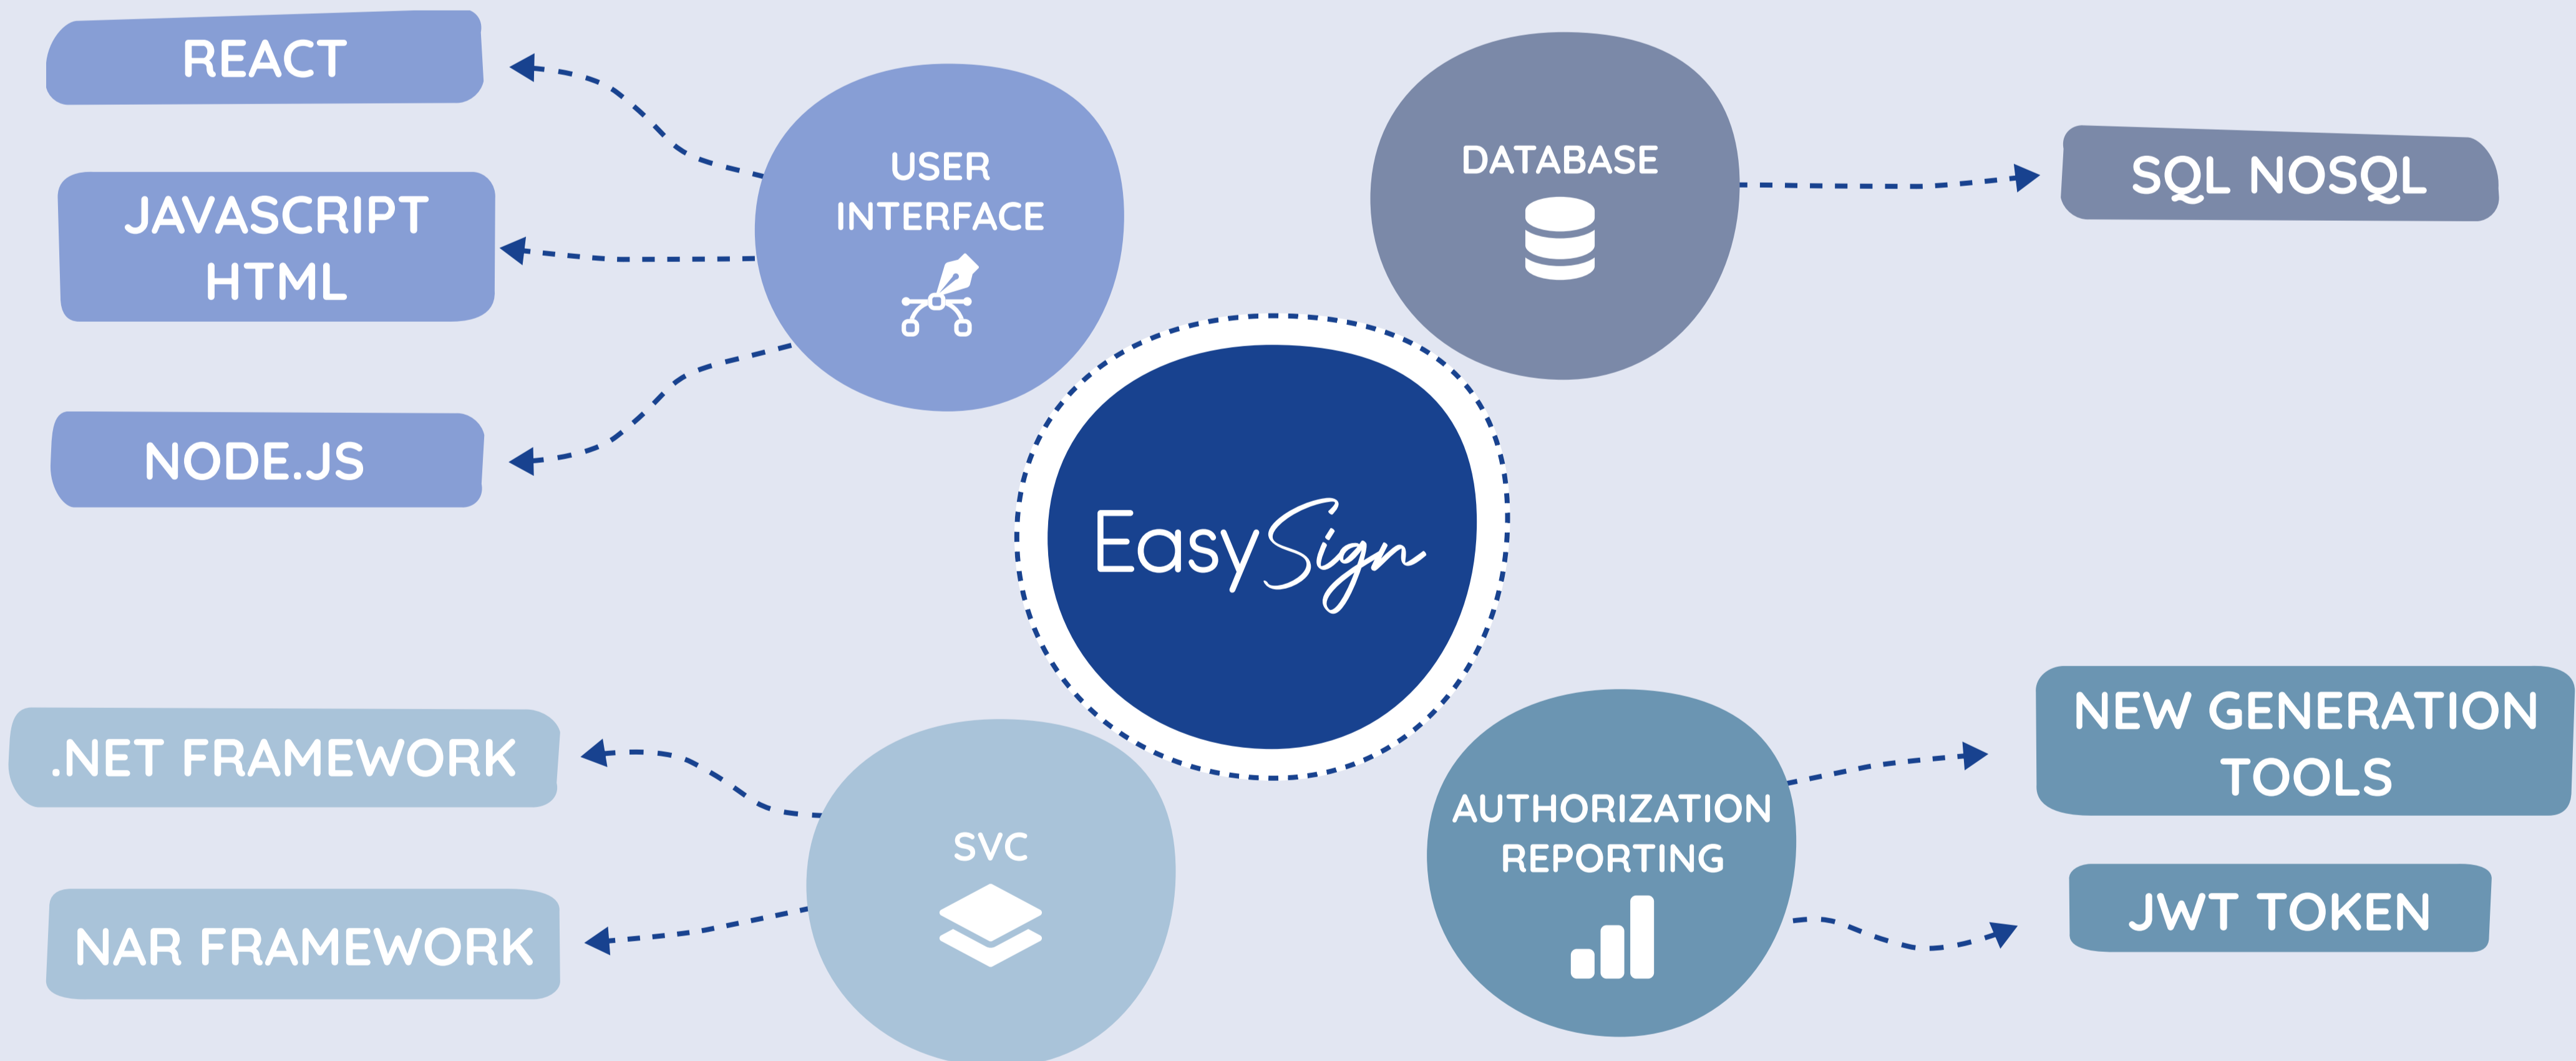

- This component provides the opportunity to authenticate users while logging in, and manage communication and notification preferences.

Authority Management

- This component enables users to perform transactions within the platform in a controlled manner in line with their authorization.
